placebo-controlled, double-blind studies are the "gold standard." This one fell short, and inexplicably so, since it would not have been difficult to add this extra layer of care.

It’s a very depressing situation overall for me because I feel like I was not good enough.

As to whether he hankers for another post in government, he can always argue that once was enough and he does not want it anyway.

Serum electrolytes, carbon dioxide level, and blood pressure should be determined as age or as late as age.
